### Company Information

Tomahawk Log & Country Homes is proud to offer the highest quality and most complete insulated hybrid homes in the log home industry. We specialize in all types of custom natural wood homes. Our Energy-Log Construction System enables you to build without the limitations commonly experienced in full log construction, such as walls settling with slip joints & jacks, warping, and twisting. Conventionally framed walls are filled with 6" high density fiberglass insulation and then wrapped with 1" high density foam Structural Insulated Sheathing for a thermal barrier offering additional energy efficiency. Walls are R-32 to R-38, roofs are +/- R-50.

Exterior walls are then sided with your choice of size and style of hand hewn, kiln dried half log or rough sawn siding, or a blend of sidings of your choice, such as stone or brick around base at grade level, and cedar shakes or board & baton on gables. Many log siding corner styles are available from 9" to 14" diameter, with 6" to 10" stack height. 12" Saddle-Lok corners are shown in corner detail and picture above. Interior finish can be selected room by room, and can be a mix of your choices of log or rough sawn sidings, knotty pine, drywall, wainscot, etc. creating the look you want in each area.

TLCH offers nationwide custom design service and packages for homes, cabins, additions, log wrap existing, & commercial, from material package to watertight shell to complete build & general contracting in many areas, we can assist throughout the design and construction process. TLCH is one of only a handful of manufacturers that has not only produced all of our own log and rough sawn components at our sawmill for more than 36 years, but we have also been constructing log homes for more than 36 years, with over 2,500 dream homes and counting.

### Company Information

True North Log Homes manufactures the best-engineered log homes in the world—homes of exceptional quality, beauty, and durability—supported by 22 Canadian and US patents. A True North log comes in the following sizes: 6-by-12 inch, 8-by-12 inch, 10-by-12 inch and 12-by-12 inch.

True North's patented **KeyLock® System** pulls the logs together to ensure a continual air-tight seal through dovetail corners, eliminating the need for caulking or chinking. The absence of nails, screws or lag bolts in this joinery system is a key advantage of a True North log home.

Our **Six Seal System®** enhances thermal performance and significantly improves the sealing capabilities of the tongue-and-groove joints between the logs.

True North's **Log Lock Compression System®** applies 2,500 lbs. of constant pressure to the logs to eliminate log wall separation and bolt adjustments required by the homeowner as logs settle. We back our technology with the only **"Zero" Air Infiltration Warranty** available in the log home industry.

We also offer the world's first machine coated pre-finished logs. The **StainLock Infusion System®** is the combination of our rustication process and True North's proprietary machine coated stain process. The stain is embedded into the surface of the log in a factory-controlled environment to increase longevity and significantly reduce time, labor, maintenance, and costs.

Learn more about our other patented technology on our website or call us for more information.

Dealers are located throughout Canada, the United States and Europe. New dealer enquires are always welcome.

### Company Information

Ward Cedar Log Homes, America's first log home manufacturer, is celebrating its 99th year in providing custom pre-cut Northern White Cedar log homes. In 1923, when Bruce Ward invented his special interlocking milling technique, he created Ward Cedar Log Homes and the premier company in the industry was founded. Today Ward builds log homes with the craftsmanship and quality of more than 95 years of experience. Using only premium pre-cut and graded northern white cedar logs, Ward homes are attractive, low maintenance and energy efficient.

Ward provides complete packages that include quality components such as natural wood interior walls, six-panel interior doors, cedar window and door trim, hand-peeled purlins, beamed ceilings, full-log gables, roofing shingles and log sealants. For added quality, Ward's complete package includes such national brands as Andersen Windows, Thermo-Tru exterior doors and Schlage locksets. All logs and trim are precision cut and numbered for easy construction. Logs are 6-by-6 or 6-by-8 and are D-shaped to create a flat interior wall surface. Hand-hewn and clapboard logs are also available.

To maximize energy efficiency, Ward engineers developed the Ward Comfort System 5. This unique, five-point log profile system provides tongue-and-groove joinery, drip edges, closed-cell foam-gasket barriers, external foam backer rods and exterior caulking. Ward also uses a specially engineered interlocking butt-and-pass corner design to further ensure energy efficiency.

Ward also features its Hybrid Log Home which is framed log construction for building in extreme climate conditions or in areas with prescriptive energy codes. With an R-value of over 30, this 2-by-6 framed wall construction includes 6-inch fiberglass batt insulation, 2-by-6 log siding with full log corners and 1-by-6 tongue-and-groove white cedar interior paneling.

Find your log home plan at [www.wardcedarloghomes.com](http://www.wardcedarloghomes.com).
