A Guide to DIY KIT HOMES

Do you dream of building your own home, but think you can't afford it? A kit home — whether you build it yourself or hire someone to do it for you — may be the key to unlocking your dream.

By Robin Mather

You can see it in your mind's eye: that perfect house, a snug cabin nestled in the woods alongside a pond shimmering in the sun's slanting rays. You've held that image in your head since you were a teenager, and now you're finally ready to build it.

You'd love to build it all by yourself, but you're not sure you have the necessary skills. Or perhaps you know that you have the skills, but the time and effort of finding all of the materials seems daunting.

Maybe a kit house is the answer. Kit houses can be grand or tiny, sophisticated or rustic, traditional or ultra-modern. Kit homes can offer efficiency in construction as well as

in energy use after the house has been built, and many kit home companies offer state-of-the-art green and renewable energy options. In short, if you'd like to build an affordable custom home (or cabin), a kit house may be a solution.

One of your first decisions will be how big to build. Census statistics show that the average home size in the United States has grown from 1,600 square feet in 1975 to more than 2,200 square feet in 2005, notes Steve Linton, president of Deltec Homes. No one but you can say what size home is right for your family, but maybe you don't need a formal dining room or that "bonus" room.

Is there a way to calculate how much your dream house will cost? The website www.B4UBuild.com, which answers questions about home construction, says a new house "will

Deltec Homes offers round and traditional house kits.

SUSTAIN DESIGN STUDIOS; LEFT: SHELTER-KIT

Shelter-Kit's barn homes are designed for beginning DIYers.

probably cost \$80 to \$200 per square foot." Thus, a 1,500-square-foot house, with no sweat equity from you, could cost \$120,000—or \$300,000. The figures provided by the companies in our chart on Page 36 range from extremely low to moderately high. Do your homework to find out what's included in your kit.

A DIY home kit can simplify a lot of your building decisions. Some house kits, such as Shelter-Kit's owner-built homes, are designed for the beginning do-it-yourselfer.

Other companies offer kits for more experienced builders, often with panelized construction (in which walls are built in a factory, then shipped to the homesite to be installed).

The next step up would be the contractor-built kit home. Finally, some companies offer home kits that can be finished as "turn-keys"—everything from the weather-tight shell to interior walls, cabinets, plumbing and electrical work.

Sustain Design Studios builds modular homes with green materials.

DELTEC HOMES (2)

Deltec Homes' round houses can be sophisticated and elegant.

Rocio Romero's sleek modern homes draw nature into the house through walls of glass.
