# StainLock Infusion System

WORLD'S 1<sup>ST</sup> MACHINE COATED PRE-FINISHED LOGS

*The StainLock Infusion System is the combination of the Rustication Process and True North's proprietary Machine Coated Stain Process.*

*StainLock* means...

Purchasing the most maintenance-free log home on the planet ✓

Move in your log home 4-6 weeks earlier ✓

Exceptional labour cost savings ✓

*"The factory applied stain saves the time, labour, and hassle of doing it later when the conditions may not be conducive to finishing (i.e. available time, winter, or in black fly/mosquito season!) We are extremely satisfied with process/outcome and would highly recommend this to all future log home buyers."*

*Jim & Lori Dawes - Lake Rosseau, Muskoka, ON*

# EXCLUSIVE FACTORY MACHINE COATED STAIN PROCESS

## Advantages to Machine Coated Logs

- Stain is applied in a climate controlled environment
- Stain is infused (embedded) into the surface of the log to increase stain longevity
- Significantly reduces time, labour, maintenance, and money

## Disadvantages to Staining On Site

- Application is weather dependent
- Stain quality relies on the ability of the painter
- More expensive as logs will require to be site prepped and cleaned prior to stain application
- More expensive as additional work to install scaffolding increases build time

# EXCLUSIVE RUSTICATION &/OR SANDING PROCESS

## Rusticated Log

- Aesthetically enhances the grain and gives the log a rustic feel
- Prepares the log to readily accept stain which increases stain penetration
- Prolongs life of the stain coatings

## Sanded Smooth Log

- Standard for both interior and exterior logs
- Results in increased clear coat adhesion and provides a smoother to the "touch" log surface
